

Math DragOn

The tool to help you with your math homework

Math DragOn is made to help you with your math homework. The key features of the app are:

- Drag and drop interface. Build complex expressions using our easy to use drag and drop interface.
- Easy keyboard input. Expressions need content, and with our intuitive keyboard you can easily insert variables and constants.
- The ability to open and save formula's. If there is a formula of which you know you are going to need it a lot, you can bookmark it for later use.
- Evaluate formula's symbolically, which is very useful with derivatives and integrals.

Slide out a drawer for the operators and drag them to the formula

Save formulas for later use and load them

About the app and a tutorial to help you understand the app

Substitute variables

Get the derivative or antiderivative by pressing one of these buttons

You can either get an approximation or a symbolic solution, you can also open Wolfram|Alpha to give you the answer
